

INDUSTRIAL RESCUE I / II™

Taught by Roco Rescue
and hosted by the NDSC.

For industrial and municipal rescuers who handle confined space and high angle rescues in industrial environments.

Industrial Rescue I / II™ takes a very hands-on approach to rescue training that provides the skills necessary to meet OSHA guidelines for a competent rescue team or rescue team member. This training will allow participants to practice rescue operations from all six (6) confined space types. These realistic scenarios can be used to document practice requirements required by OSHA 1910.146.

Simulated rescues from IDLH-type atmospheres that require the use of Supplied Air Respirators (SAR / SCBA) will also be included. Participants will be taught safe, simple and proven techniques that will allow them to effectively perform confined space rescues from elevated vessels and towers. This course also includes skills required to perform rescue in offshore platform environments as well as rescue from fall protection (rescuing workers suspended from fall protection). Classroom lecture will cover applicable OSHA, ANSI and NFPA standards as well as Authorized Entrant, Attendant and Supervisor training.

Course Length: 50 Hours / Five 10-Hour Days

Pricing: NDSC Members: \$1,195 Non-Members: \$1,435

COURSE TOPICS

- Safety Precautions
- Regulations Overview
- Rope Analysis
- Equipment
- Knots
- Anchoring and Rigging
- Safety Line Belay
- Patient Packaging
- Mechanical Advantage
- Lowering Systems
- Hauling Systems
- Litter Rigging
- Low-Point Raises (Pick & Pivot)
- Tripod Operations
- Rescue from Fall Protection
- Elevated Rescue Scenarios
- Confined Space Awareness / Operations
- Breathing Apparatus (SAR / SCBA)
- Confined Space Scenarios (Non-IDLH)
- On-Air Confined Space Scenarios (IDLH)
